Description / Abstract

In 2019, the Congo General Directorate of Hydraulics, with the support of the Congo Country Water Partnership and GWP Central Africa, led a multi-stakeholder process to design the 2030 IWRM Action Plan based on an analysis of the 2018 country baseline survey on SDG 6.5.1 implementation. The objective of the workshops was to design an Action Plan for integrated water resources management with priority actions on the short-, mid-, and long-term for the timeframe 2019-2030.

The result was an Action Plan consisting of eleven action points adopted for implementation and covering all four of the IWRM dimensions.The action planning process was supported by the SDG 6 IWRM Support Programme.
