Women’s Empowerment in Agriculture Index

|

Description / Abstract

The Women’s Empowerment in Agriculture Index (WEAI) is an aggregate index, reported at the country or regional level, based on individual-level data collected by interviewing men and women within the same households. The WEAI comprises two sub-indices. The first assesses the degree to which respondents are empowered in five domains of empowerment (5DE) in agriculture. It reflects the percentage of women and men who are empowered and, among those who are not, the percentage of domains in which they enjoy adequate achievements.
