Addressing Water in National Adaptation Plans. Water Supplement to the UNFCCC NAP Technical Guidelines

|

Description / Abstract

This NAP Water Supplement offers guidance for integrating water perspectives in countries' NAP processes. As the urgency to adapt is paramount, the NAP Water Supplement provides countries, water managers, and development practitioners with additional guidance to raise the profile of water in adaptation and implement integrated water management measures to enhance resilience to climate change risks. With countries preparing to initiate the second generation of their Nationally Determined Contributions, the Water Supplement also provides a reference point for countries to take stock and reflect on the water-related adaptation challenges that need increased ambition in planning beyond 2020. The NAP Water Supplement accompanies UNFCCC NAP Technical Guidelines prepared by the Least Developed Countries Expert Group of the UNFCCC.
