Operationalising Participatory Research and Gender Analysis: New Research and Assessment Approaches

|

Author(s)

Dixon, John Lilja, Nina

Description / Abstract

Participatory research approaches are increasingly popular with scientists working for poverty alleviation, sustainable rural development, and social change. This introduction offers an overview of the special issue of 'Development in Practice' journal on the theme of 'operationalising participatory research and gender analysis'. The purpose of the special issue is to add value to the discussion of methodological, practical, philosophical, political, and institutional issues involved in using gender-sensitive participatory methods. Drawing on 16 articles, we place some of the main issues, empirical experiences, and debates in participatory research and participatory technology development in the context of implementation, evaluation, and institutionalisation of participatory research and evaluation approaches.
