## June 2023 ENSO update: El Niño is here

|

**Author(s)**

Becker, Emily

**Description / Abstract**

El Niño conditions have developed, as the atmospheric response to the warmer-than-average tropical Pacific sea surface kicked in over the past month. We expect El Niño to continue into the winter, and the odds of it becoming a strong event at its peak are pretty good, at 56%. Chances of at least a moderate event are about 84%.
